

I claim:

1. A method of remodeling a subsisting countertop by casting a polymer-modified concrete mix overlay thereupon in situ, comprising the steps of:
  - providing a subsisting countertop;
  - permanently attaching lath to the subsisting countertop;
  - temporarily attaching edging forms or flow checks around all the free edges of the subsisting countertop, which edging forms and flow checks check the flow of a casting compound to the height of a given rise;
  - providing a polymer-modified cementitious casting compound;
  - pouring the casting compound over the countertop as well as the lath and within the bounds of the edging forms and flow checks to the level of the given rise; and
  - removing the edging forms and flow checks optionally within a day.
